A World on the Wing: The Global Odyssey of Migratory Birds

2021-03-30

new york times bestseller finalist for the los angeles times book prize a library journal best science and technology book of the year an exhilarating exploration of the science and wonder of global bird migration in the past two decades our understanding of the navigational and physiological feats that enable birds to cross immense oceans fly above the highest mountains or remain in unbroken flight for months at a stretch has exploded what we've learned of these key migrations how billions of birds circumnavigate the globe flying tens of thousands of miles between hemispheres on an annual basis is nothing short of extraordinary bird migration entails almost unfathomable endurance like a sparrow sized sandpiper that will fly nonstop from canada to venezuela the equivalent of running 126 consecutive marathons without food water or rest avoiding dehydration by drinking moisture from its own muscles and organs while orienting

itself using the earth's magnetic field through a form of quantum entanglement that made Einstein queasy crossing the Pacific Ocean in nine days of nonstop flight as some birds do. Leaves little time for sleep but migrants can put half their brains to sleep for a few seconds at a time alternating sides and their reaction time actually improves. These and other revelations convey both the wonder of bird migration and its global sweep from the mudflats of the Yellow Sea in China to the remote mountains of northeastern India to the dusty hills of southern Cyprus. This breathtaking work of nature writing from Pulitzer Prize finalist Scott Weidensaul also introduces readers to those scientists, researchers, and bird lovers trying to preserve global migratory patterns in the face of climate change and other environmental challenges. Drawing on his own extensive fieldwork in a world on the wing, Weidensaul unveils with dazzling prose the miracle of nature taking place over our heads.

Whole World on Fire

2004

whole world on fire focuses on a technical riddle wrapped in an organizational mystery how and why for more than half a century did the u s government fail to predict nuclear fire damage as it drew up

plans to fight strategic nuclear war u s bombing in world war ii caused massive fire damage to hiroshima and nagasaki but later war plans took account only of damage from blast they completely ignored damage from atomic firestorms recently a small group of researchers has shown that for modern nuclear weapons the destructiveness and lethality of nuclear mass fire often and predictably greatly exceeds that of nuclear blast this has major implications for defense policy the u s government has underestimated the damage caused by nuclear weapons lynn eden finds and built far more warheads and far more destructive warheads than it needed for the pentagon s war planning purposes how could this have happened the answer lies in how organizations frame the problems they try to solve in a narrative grounded in organization theory science and technology studies and primary historical sources including declassified documents and interviews eden explains how the u s air force s doctrine of precision bombing led to the development of very good predictions of nuclear blast a significant achievement but for many years to no development of organizational knowledge about nuclear fire expert communities outside the military reinforced this disparity in organizational capability to predict blast damage but not fire damage yet some

innovation occurred and predictions of fire damage were nearly incorporated into nuclear war planning in the early 1990s the author explains how such a dramatic change almost happened and why it did not whole world on fire shows how well funded and highly professional organizations by focusing on what they do well and systematically excluding what they don t do well may build a poor representation of the world a self reinforcing fallacy that can have serious consequences in a sweeping conclusion eden shows the implications of the analysis for understanding such things as the sinking of the titanic the collapse of the tacoma narrows bridge and the poor fireproofing in the world trade center
