Pilot Selection Methods 2000-09-01

this report consists of eight parts the first part is concerned with describing pilot selection why it is important and the knowledge skills abilities and other characteristics typically considered during selection part two introduces the concept of validity and the steps involved in doing a validation study part three reviews some common methodological issues that make the interpretation of pilot selection studies more difficult and offers best practices advice for researchers and practitioners part four describes several common criterion measures of pilot training and job performance and research regarding the development of models of performance parts five and six review military and commercial pilot selection practices where available information about the construct and predictive validity of the selection methods is provided part seven examines future trends in the measurement of pilot aptitude

finally part eight provides recommendations for pilot selection researchers and practitioners most important in conducting pilot selection research is scientific rigor without scientific rigor results may be worse than meaningless leading to counterproductive practice before setting out to develop a pilot selection system it is imperative to have a firm foundation in the published literature of human abilities reliability validity job performance measurement and meta analysis cumulative research results should guide practice the military has a long history of research in the selection of pilots and other aviation occupations in general they have used both paper and pencil tests and apparatus tests such as psychomotor cumulative results suggest that general cognitive ability g has been a mainstay of military testing and will likely remain so measures of pilot job knowledge and psychomotor ability have demonstrated incremental validity when used with measures of g

Retest Performance on an Experimental Computer-Based Pilot Aptitude Test Battery 1998

basic attributes test bat is a computer based battery that contributes to a us air force pilot selection composite known as the pilot candidate selection method pcsbm when the bat was operationally implemented in 1993 110 retests were allowed because its retest characteristics had not been adequately examined at that point results from a recent study of bat retest characteristics mean score change reliability concluded that a bat retest could be permitted no less than six months after initial testing the current research effort examined retest performance on several experimental computer based tests that are being considered as candidate replacement tests for the bat participants were 340 paid volunteers who completed the test battery and were retested after two weeks one month three months or six months results were consistent with those observed earlier for the bat first the experimental computer based tests demonstrated acceptable reliability second most students showed improvement on retest regardless of the length of the retest interval third in general practice effects diminished as the length of the retest interval increased however the size and duration of the practice effect varied by test content a few tests showed performance improvements for the shorter retest intervals two weeks or one month but little or no improvements for longer retest intervals three or six months other tests showed moderate to large improvements in performance on retest even for the six month retest interval these results suggest that as with the bat retests could be performed no sooner than six months after initial testing

U.S. Air Force Pilot Selection and Training Methods 2000

u s air force usaf pilot selection and training procedures have changed substantially in the last several years pilot selection procedures were augmented with the introduction of computer based testing to assess pilot aptitude training procedures have changed in an effort to modernize the training fleet and provide better more specialized training earlier in the training process results despite several studies showing the utility of usaf pilot aptitude tests for predicting training performance results of a recent policy capturing study suggest that this information is often ignored by pilot candidate selection boards the two largest sources of usaf pilot trainees relied heavily on measures of officership when making selection decisions cumulative research findings suggest that usaf pilot selection decisions could be improved by making better use of currently available personnel attribute data further improvements could be expected from the addition of a structured selection interview and measures of personality

the air force has long recognized the importance of selecting the most qualified officers possible for more than 60 years it has relied on the air force officer qualifying test afoqt as one measure of those qualifications a variety of concerns have been raised about whether the afoqt is biased too expensive or even valid for predicting officer success the authors conducted a literature search to answer these concerns they conclude that the afoqt is a good selection test that predicts important air force outcomes and is not biased against minorities or women the air force would not benefit by replacing the afoqt with the sat primarily because it would still have to administer subtests that measure specific aptitudes and knowledge needed for predicting pilot and combat systems officer success however other valid selection tools such as personality tests could be used to complement the afoqt
