*The Animal and the Human in Ancient and Modern Thought* 2016-12-01 ancient greeks endeavored to define the human being vis à vis other animal species by isolating capacities and endowments which they considered to be unique to humans this approach toward defining the human being still appears with surprising frequency in modern philosophical treatises in modern animal behavioral studies and in animal rights literature to argue both for and against the position that human beings are special and unique because of one or another attribute or skill that they are believed to possess some of the claims of man s unique endowments have in recent years become the subject of intensive investigation by cognitive ethologists carried out in non laboratory contexts the debate is as lively now as in classical times and what is of particular note the examples and methods of argumentation used to prove one or another position on any issue relating to the unique status of human beings that one encounters in contemporary philosophical or ethological literature frequently recall ancient precedents this is the first book length study of the man alone of animals topos in classical literature not restricting its analysis to greco roman claims of man s intellectual uniqueness but including classical assertions of man s physiological and emotional uniqueness it supplements this analysis of ancient manifestations with an examination of how the commonplace survives and has been restated

transformed and extended in contemporary ethological literature and in the literature of the animal rights and animal welfare movements author stephen t newmyer demonstrates that the anthropocentrism detected in greek applications of the man alone of animals topos is not only alive and well in many facets of the current debate on human animal relations but that combating its negative effects is a stated aim of some modern philosophers and activists

**Brutal Reasoning** 2019-02-15 early modern english thinkers were fascinated by the subject of animal rationality even before the appearance of descartes's discourse on the method 1637 and its famous declaration of the automatism of animals but as erica fudge relates in brutal reasoning the discussions were not as straightforward or as reflexively anthropocentric as has been assumed surveying a wide range of texts religious philosophical literary even comic fudge explains the crucial role that reason played in conceptualizations of the human and the animal as well as the distinctions between the two brutal reasoning looks at the ways in which humans were conceptualized at what being human meant and at how humans could lose their humanity it also takes up the questions of what made an animal an animal why animals were studied in the early modern period and at how people understood and misunderstood what they saw when they did look from the influence of classical thinking on the human animal divide and debates surrounding the rationality of women children and native americans to the frequent references in popular and pedagogical texts to morocco the intelligent horse fudge gives a new and vital context to the human perception

of animals in this period at the same time she challenges overly simplistic notions about early modern attitudes to animals and about the impact of those attitudes on modern culture

Art for Animals 2018-04-09 animal rights activists today regularly use visual imagery in their efforts to shape the public's understanding of what it means to be kind, cruel, and inhumane toward animals. *Art for Animals* explores the early history of this form of advocacy through the images and the people who harnessed their power following in the footsteps of earlier formed organizations like the RSPCA and ASPCA. Animal advocacy groups such as the Victoria Street Society for the Protection of Animals from Vivisection made significant use of visual art in literature and campaign materials but enabled by new and improved technologies and techniques they took the imagery much further than their predecessors did, turning toward vivid, pointed, and at times graphic depictions of human-animal interactions. Keri Cronin explains why the activist community embraced this approach, details how the use of such tools played a critical role in educational and reform movements in the United States, Canada, and England, and traces their impact in public and private spaces far from being peripheral illustrations of points articulated in written texts or argued in impassioned speeches. These photographs, prints, paintings, exhibitions, magic lantern slides, and films were key components of animal advocacy at the time, both educating the general public and creating a sense of shared identity among the reformers, uniquely focused on imagery from the early days of the animal rights movement and filled with striking visuals. *Art for Animals* sheds new light on the history and development of modern animal advocacy.

Her name is Raptor Red, and she is a female raptor dinosaur painting a rich and colorful picture of a lush prehistoric world. Leading paleontologist Robert T. Bakker tells his story from within Raptor Red's extraordinary mind, dramatizing his revolutionary theories in this exciting tale from a tragic loss to the fierce struggle for survival to a daring migration to the Pacific Ocean to escape a deadly new predator. Raptor Red combines fact and fiction to capture for the first time the thoughts, emotions, and behaviors of the most magnificent enigmatic creatures ever to walk the face of the earth.

*Are Men Animals?* 2019-11-12 boys will be boys, the saying goes, but what does that actually mean? A leading anthropologist investigates why do men behave the way they do. Is it their male brains surging testosterone from vulgar locker room talk to mansplaining to sexual harassment? Society is too quick to explain male behavior in terms of biology. In *Are Men Animals?* anthropologist Matthew Gutmann argues that predatory male behavior is in no way inevitable. Men behave the way they do because culture permits it, not because biology demands it. To prove this, he embarks on a global investigation of masculinity, exploring everything from the gender-bending politics of American college campuses to the marriage markets of Shanghai and the women-only subway cars of Mexico City. Gutmann shows just how complicated masculinity can be. The result isn't just a new way to think about manhood; it's a guide to a better life for all of us.

An Anthology of Modern Animal Writing 1937 the fascinating story of how the fossils of dinosaurs mammoths and other extinct animals influenced some of the most spectacular creatures of classical mythology griffins centaurs cyclopes and giants these fabulous creatures of classical mythology continue to live in the modern imagination through the vivid accounts that have come down to us from the ancient greeks and romans but what if these beings were more than merely fictions what if monstrous creatures once roamed the earth in the very places where their legends first arose this is the arresting and original thesis that adrienne mayor explores in *The First Fossil Hunters* through careful research and meticulous documentation she convincingly shows that many of the giants and monsters of myth did have a basis in fact in the enormous bones of long extinct species that were once abundant in the lands of the greeks and romans as mayor shows the greeks and romans were well aware that a different breed of creatures once inhabited their lands they frequently encountered the fossilized bones of these primeval beings and they developed sophisticated concepts to explain the fossil evidence concepts that were expressed in mythological stories the legend of the gold guarding griffin for example sprang from tales first told by scythian gold miners who passing through the gobi desert at the foot of the altai mountains encountered the skeletons of protoceratops and other dinosaurs that littered the ground like their modern counterparts the ancient fossil hunters collected and measured impressive petrified remains and displayed them in temples and museums they attempted to reconstruct the appearance of these prehistoric creatures and to explain their extinction long thought to be fantasy the remarkably detailed and perceptive greek and roman accounts of giant bone finds were actually based on solid paleontological facts by reading these neglected narratives for the first time in the light of modern scientific discoveries adrienne mayor illuminates a lost world of ancient paleontology

Animal Agriculture 2019-10-25 a groundbreaking study of how emotions motivate attempts to counter species loss this groundbreaking book brings together environmental history and the history of emotions to examine the motivations behind species conservation actions in recovering lost species in the modern age dolly jørgensen uses the environmental histories of reintroduction rewilding and resurrection to view the modern conservation paradigm of the recovery of nature as an emotionally charged practice jørgensen argues that the recovery of nature identifying that something is lost and then going out to find it and bring it back is a nostalgic practice that looks to a historical past and relies on the concept of belonging to justify future oriented action the recovery impulse depends on emotional responses to what is lost particularly a longing for recovery that manifests itself in such emotions as guilt hope fear and grief jørgensen explains why emotional frameworks matter deeply both for how people understand nature theoretically and how they interact with it physically the identification of what belongs the lost nature and our longing the emotional attachment to it in the present will affect how environmental restoration practices are carried out in the future a sustainable future will depend on questioning how and why belonging and longing factor into the choices we make about what to recover
