La guérison des maladies 1924

includes pictures includes excerpts of contemporary accounts and a bibliography for further reading plague and pestilence have both fascinated and terrified humanity from the very beginning societies and individuals have struggled to make sense of them and more importantly they ve often struggled to avoid them before the scientific age people had no knowledge of the microbiological agents unseen bacteria and viruses which afflicted them and thus the maladies were often ascribed to wrathful supernatural forces even when advances in knowledge posited natural causes for epidemics and pandemics medicine struggled to deal with them and for hundreds of years religion continued to work hand in hand with medicine inevitably that meant physicians tried a variety of practices to cure the sick and many of them seem quite odd by modern standards by the time rome was on the rise physicians understood that contagions arose and spread but according to galen hippocrates and other greco roman authorities pestilence was caused by miasma foul air produced by the decomposition of organic matter though modern scientists have since been able to disprove this on the face of it there was some logic to the idea physicians and philosophers they were very often the

same galen being an example noticed that disease arose in areas of poor sanitation where filth and rotting matter was prevalent and not disposed of and the basic measures to prevent disease waste removal provision of clean food and water and quarantining would have been obvious to them the scenting of miasmatic air with incense and other unguents to expel the foulness would also have thus made sense though people now know that can't stop the spread of a disease ancient physicians at the time believed that miasma was not the direct cause of disease but rather a catalyst maladies were caused by an imbalance of what galen called the four humors according to him and hippocrates before him the body contained four kinds of fluids black bile yellow bile blood and phlegm these corresponded to the four elements of which the entire universe was composed earth fire water and air black bile was tied to earth yellow bile to fire blood to air and phlegm to water it was believed that the balance of the humors in the body not only determined an individual's health but their behavior and temperament as well a melancholic from melanos the word for black disposition was caused by an excess of black bile yellow bile made a person fiery or choleric from khole the word for bile while a phlegmatic from phlegma body moisture temperament denoted a surplus of phlegm the most desirable temperament was the sanguine sanguis blood which exhibited happiness calm and enthusiasm the ancient romans thought miasma caused an imbalance in these fluids and disease resulted for the ancient physician as indeed for all physicians for the next 1500 years or so illness was not the direct result of external agents the high middle ages had seen a rise in western europe's population in previous centuries but these gains were almost entirely erased as the plague spread rapidly across all of europe from 1346-1353 with a medieval understanding of medicine

diagnosis and illness nobody understood what caused black death or how to truly treat it as a result many religious people assumed it was divine retribution while superstitious and suspicious citizens saw a nefarious human plot involved fighting the plague in antiquity and the middle ages the history of ancient and medieval efforts to prevent the spread of diseases looks at the ways past societies have striven to cope with epidemics and the various remedies some bizarre some desperate others logical but nonetheless misguided they employed the approaches include an eclectic mix of medicine supernatural rituals religion and philosophy

Antiquity, Greece and Rome 1926

this volume has its origin in the 14th university of south africa classics colloquium in which the topic and title of the event were inspired by josiah ober's seminal work mass and elite in democratic athens 1989 indeed the influence this work has had on later research in all aspects of the greek and roman world is reflected by the diversity of the papers collected here which take their cue and starting point from the argument that in ober's words 1989 338 rhetorical communication between masses and elites was a primary means by which the strategic ends of social stability and political order were achieved however the contributors to the volume have also sought to build

further on such conclusions and to offer new perceptions about a spread of issues affecting mass and elite interaction in a far wider number of locations around the ancient mediterranean over a much longer chronological span thus the conclusions here suggest that once the concept of mass and elite was established in the minds of greeks and later romans it became a universal component of political life and from there was easily transferred to economic activity or religion in casting the net beyond the confines of athens although the city is also represented here to amongst others syracuse the cities of asia minor pompeii and rome and to literary and philosophical discourse in each instance that interplay between the wider body of the community and the hierarchically privileged can be shown to have governed and directed the thoughts and actions of the participants
