the human animal bond has evolved and diversified down the ages dogs cats and even horses have long fulfilled the role of faithful companion and indeed as exemplified by the introduction of seeing and hearing dogs there may be a critical level of co dependency between the species in the twenty first century the animal types that are kept as pets in many parts of the world are extensive ranging from reptiles through rodents to ruminants and beyond as would be predicted by the nature of the relationship the approach to treatment of a companion animal is often closely aligned to that which would have been offered to their owner however an increasing awareness of welfare issues such as the recognition that animals experience pain and the proven benefits of disease prevention in intensive farming units together with the growth in zoos and wildlife parks has increased the likelihood of food producing and non domesticated animals receiving medicinal products during their life time although many of the individual drugs or classes of drugs administered to animals are the same as or derived from those given to man the safe and effective use of drugs in animals often cannot be achieved by simply transposing knowledge of drug action on or behaviour in the body from one species to another the impact of the anatomical physiological and pathophysiological variability that spans the animal kingdom can often profoundly alter drug response

excerpt from practical veterinary pharmacology and therapeutics this book is intended for a practical text on veterinary materia medica pharmacology and therapeutics the author realizes that the only object of studying pharmacology is the use of drugs in treating disease yet in order to prescribe a drug intelligently it is necessary to have more than a general idea of its action the greater emphasis is placed upon pharmacology because the author believes that the only place to study materia medica is in the laboratory and therapeutics can best be studied in medicine and the clinics there are numerous ways in which remedies may be grouped and none is perfect although it seems that a therapeutic grouping has many advantages since it allows a better correlation between the action and the uses of the different agents consequently the plan has been to discuss the different groups in a general way and then follow with a detailed description of the individual drugs the prescriptions are intended

only to be representative and to illustrate the ways in which medicines may be prescribed although many of them have been tried and are in almost daily use by the author the author claims little if any originality in the material included he has drawn freely from the current literature and standard books on the subject he has not considered it wise to include a bibliography in a book of this kind yet he would especially desire to mention such books as those of cushny sollmann bastedo dixon hoare and frohner on pharmacology and therapeutics those of law and hutya and marek on medicine and amy on pharmacy in conclusion i desire to express my appreciation to dr c p fitch for the most excellent chapter on bacterius serums vaccines and antitoxins and to prof p a fish for the use of several tracings about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
