*Proceedings of the international conference on Machine Learning* 1958 our world is being revolutionized by data driven methods access to large amounts of data has generated new insights and opened exciting new opportunities in commerce science and computing applications processing the enormous quantities of data necessary for these advances requires large clusters making distributed computing paradigms more crucial than ever mapreduce is a programming model for expressing distributed computations on massive datasets and an execution framework for large scale data processing on clusters of commodity servers the programming model provides an easy to understand abstraction for designing scalable algorithms while the execution framework transparently handles many system level details ranging from scheduling

to synchronization to fault tolerance this book focuses on mapreduce algorithm design with an emphasis on text processing algorithms common in natural language processing information retrieval and machine learning we introduce the notion of mapreduce design patterns which represent general reusable solutions to commonly occurring problems across a variety of problem domains this book not only intends to help the reader think in mapreduce but also discusses limitations of the programming model as well
