**Open Access Musicology 2020-10-30** in the fall of 2015 a collection of faculty at liberal arts colleges began a conversation about the challenges we faced as instructors why were there so few course materials accessible to undergraduates and lay readers that reflected current scholarly debate how can we convey the relevance of studying music history to current and future generations of students and how might we represent and reflect the myriad often conflicting perspectives positions and identities that make up both music s history and the writers of history here we offer one response to those questions open access musicology is a collection of essays written in an accessible style and with a focus on modes of inquiry rather than content coverage our authors draw from their experience as scholars but also as teachers they have been asked to describe why they became musicologists in the first place and how their individual paths led to the topics they explore and the questions they pose like most scholarly literature the essays have all been reviewed by experts in the field unlike all scholarly literature the essays have also been reviewed by students at a variety of institutions for clarity and relevance these essays are intended for undergraduates graduate students and interested readers without any particular expertise they can be incorporated into courses on a range of topics as standalone readings or used to supplement textbooks the topics introduce and explore a variety of subjects practices and methods but above all seek to stimulate classroom discussion on music history s relevance to performers listeners and citizens

**Ballads Without Words** 1992 this book reviews recent approaches for partial identification of average treatment effects with instrumental variables in the program evaluation literature including Manski's bounds, bounds based on threshold crossing models and bounds based on the local average treatment effect (LATE) framework. It compares these bounds across different sets of assumptions, surveys relevant methods to assess the validity of these assumptions, and discusses estimation and inference methods for the bounds. The book also reviews some empirical applications employing bounds in the program evaluation literature. It aims to bridge the gap between the econometric theory on which the different bounds are based and their empirical application to program evaluation.

combines intellectual institutional and political history to reinterpret postwar american life through the changes in higher education acknowledging but rejecting the prevailing conception of the cold war university largely dedicated to supporting national security schrum provides a more complete and contextualized account of the american research university between 1945 and 1970 uncovering a pervasive instrumental understanding of higher education during that era the instrumental university shows that universities framed their mission around solving social problems and promoting economic development as central institutions in what would soon be called the knowledge economy in so doing these institutions took on more capitalistic and managerial tendencies and as a result marginalized founding ideals such as pursuit of knowledge in academic disciplines and freedom of individual investigators the technocratic turn eroded some practices that made the american university special yet as schrum suggests the instrumental university was not yet the neoliberal university of the 1970s and onwards in which market considerations trumped all others university of california president clark kerr and other innovators in higher education were driven by a progressive impulse that drew on an earlier tradition grounded in a concern for the common good and social welfare
